[Check the syllabus here.](#)

However, please don't take our word for this, please see what other students have said of our courses on our [Testimonials page](#).

Hypnotherapy has been used successfully for hundreds of years to address pain relief, insomnia, addiction, phobias, stress, anxiety and IBS; and so much more.

There is an enormous body of evidence that indicates it can greatly aid and galvanise the body's natural healing processes in a wide variety of illnesses.

Our syllabus journeys you through a course of therapeutic interventions necessary for professional practice as a hypnotherapist with a developing clinical practice.

We follow a procedure of discussing the intervention to be used, followed by a demonstration and then group practise. This threefold learning process ensures confidence in you to be able to address client issues within your practice. On completion of this course you will have ADCH after your name.

*"Thank you, James, and the SCCP for all your help and guidance I feel confident in building my practice, you have given me a new lease of life! At my age, it was difficult to gain employment, I now have purpose and meaning in my life."*
